iScreen™ Mono

Mononucleosis Rapid Test Cassette

Simple, point-of-care detection of Infectious Mononucleosis

Kit includes:

- External positive/negative controls
- Developer buffer
- Transfer pipette

Features

Screens whole blood, serum & plasma samples..... Flexible testing
 CLIA Waived for whole blood samples..... Simple laboratory procedure
 Results in minutes..... Rapid results for early diagnosis
 Room temperature storage..... Convenient handling
 Very high overall accuracy..... Confidence in test results

Benefits

Product Code:	Kit Size:	Description:	Complexity:
I-MO-402.....	20/BX.....	Cassette.....	CLIA Waived/whole blood, Moderate/serum, plasma

iScreen™ Mono positive result shown above.

Instructions for I-MO-402

Procedure **Read procedure before running test. Refer to package insert for details.**

Place test device on a clean, dry, level surface.

Venipuncture Whole Blood

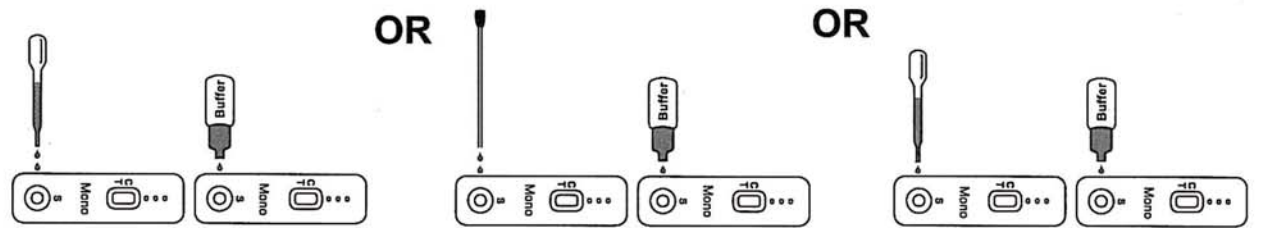

Add 2 Drops of Blood (about 50 µL), then 1 Drop of Buffer to the Sample Well.

Fingerstick Whole Blood

Add 1 Capillary Tube of Blood (about 50 µL), then 1 Drop of Buffer to the Sample Well.

Serum/Plasma

Add 1 Drop of Serum or Plasma (about 25 µL), then 1 Drop of Buffer to the Sample Well.

Interpretation of Results

➔ Read result at five (5) minutes. Do not move test device until ready to read.
